IT BEGINS: Wisconsin Company Three Square Market Becomes First In United States To Microchip Their Employees

Sunday, July 23, 2017 21:01

Wisconsin company Three Square Market is about to become the first in the U.S. to offer microchip implants to its employees. Yes, you read that right. Microchip implants.

“And he causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads: And that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name.” Revelation 13:16, 17 (KJV)

EDITOR’S NOTE: Now the End Begins began 8 years ago in December of 2009 primarily as an end times ministry warning the world of God’s impending judgment and the soon fulfillment of Bible prophecy. We have done countless stories chronicling the rise of the human implantable microchip in our society. What began as a mere trickle in Europe is ready to break through here in America as the implantable microchip becomes the “next big thing”. Remember those lines of people waiting for days on end to be the first to get the new iPhone? That’s what you will soon see with the microchip. Flight #777 on 7/17/13 Airlines now boarding...

“It’s the next thing that’s inevitably going to happen, and we want to be a part of it,” Three Square Market Chief Executive Officer Todd Westby said.

The company designs software for break room markets that are commonly found in office complexes.

Official press release from 32M:

RIVER FALLS, Wis. - July 20, 2017 - PRLog – Three Square Market (32M) is offering implanted chip technology to all of their employees on August 1st, 2017. Employees will be implanted with a RFID chip allowing them to make purchases in their break room micro market, open doors, login to computers, use the copy machine, etc. This program, offered by 32M, is optional for all employees. The company is expecting over 50 staff members to be voluntarily chipped. 32M is partnering with Biohax International and Jowan Osterlund, CEO, based out of Sweden. source

Just as people are able to purchase items at the market using phones, Westby wants to do the same thing using a microchip implanted inside a person’s hand.

“We’ll come up, scan the item,” he explained, while showing how the process will work at an actual break room market kiosk. “We’ll hit pay with a credit card, and it’s asking to swipe my proximity payment now. I’ll hold my hand up, just like my cell phone, and it’ll pay for my product.”

More than 50 Three Square Market employees are having the devices implanted starting next week. Each chip is about the size of a single grain of rice.

Along with purchasing market kiosk items, employees will be able to use the chip to get into the front door and log onto their computers.

Each chip costs $300 and the company is picking up the tab. They’re implanted between a person’s thumb and forefinger. Westby added the data is both encrypted and secure.

“There’s no GPS tracking at all,” he said.

No one who works at Three Square Market is required to get the chip implant. source
