RELEASE NOTES

Website 1.49 | Enhancement & Fixes:

- Fixed an issue where saving Store Settings would reset two-tier pricing.
- Fixed an issue where Station Settings wouldn't load when Reboot Time was set to zero.
- Fixed an issue that caused the end date to save incorrectly on the Rewards page.
- Fixed an issue in User Management where transaction details would appear twice.
- Fixed an issue where item changes marked as Theft were not appearing in reports.

Website 1.49 | New Features & Changes:

- Added Theft to the Profit and Loss report
- Added 32M Policy messages on kiosk and mobile app.
- Edit Kiosk Message: Messages can now be scheduled to appear on a specified date.
- Sales Summary Report: Added additional functionality to include invoice fields.
- Added option to use "invoice" instead of "payroll" terminology on the kiosk.
- Multiple stores can now be selected on the Cashbox Reconciliation History Report.
- Additional tax fee has been added for our Canadian operators.
- Added a new report named View Current Inventory. This report provides a global inventory snapshot for the date and stores selected.
- Added a new report named Cash On Hand. This report provides current cashbox totals from all stores.
- Updated text on All Transactions report to more accurately convey transaction dates.
- Added new report named Item Sales. This is a detailed item sales report that displays item information.
- Added spoilage options to the warehouse inventory management tools.
- Added new features to automatic ordering. The system will now take a snapshot of past sales data to estimate which items will sell between your order and delivery date and add them to the order.

Kiosk 3.0.0.23 | Enhancement & Fixes

- Fixed an issue where cash deposits would occasionally duplicate.
- Fixed an issue where the payment method would record incorrectly during some market account purchases.
- Fixed a rounding issue.
- Corrected some of our French translations.
- Fixed an issue where users with disabled fingerprints could still login.
- Fixed an issue where our Moneris pin pads would not initialize properly as a second payment type.
- Fixed an issue where Payroll purchases would sometimes duplicate.
- Fixed an issue where the kiosk would not accept purchases for an amount of zero.
- Made improvements to help minimize the occurrence of "white screen" problems.
- Fixed an issue where some Moneris transactions were being approved on the terminal but denied on the kiosk.

Kiosk 3.0.0.23 | New Features & Changes:

- We now hide the fingerprint login option when biometics are not installed on the kiosk.
- We have introduced RFID technology as a login type.
- Added function to kiosk that prompts a user for missing account information.
- We've updated the VISA icon on our payment screens.
- Improved our credit card duplicate protection.
